Block m+1

File zone

! ⑳ Enumerate the data block addressing types of an i-node.

In an I-NODE, the first 10 blocks are the data blocks that have direct access to the memory, the 11th block is single indirected, the 12th is double redirected and the 13th block is triple redirected. The very first part of the I-NODE contains the meta data this is the file size, permissions and ownership.

I-NODE: (10 | 1 | ... | 9) (10) (11) (12)
